### FAQ

### YOU ASK, WE ANSWER.

#### 1. *What's the difference between a Hydrovac and a Vac Truck?*

**Hydrovac trucks** use high-pressure water and suction to safely dig around pipelines, utilities, and sensitive areas without causing damage.

**Vac trucks** are designed to quickly remove liquids, sludge, and solids from tanks, spills, or sumps. They're powerful and fast.

Hydrovac = Safe digging.

Vac Truck = Heavy-duty cleanups.

**We use the right truck for the job so you get the best result, every time.**

#### 2. *Is Hydrovac excavation really safer than traditional digging?*

**Yes**, and that's why it's the industry standard.

Hydrovac uses pressurized water to loosen soil and a vacuum to remove it, which means no risk of hitting underground lines or damaging infrastructure. It's cleaner, more controlled, and keeps crews and sites safer.

# SUPER SUCKER HYDROVAC

Our tri-drive hydrovacs are built for non-destructive excavation and material removal. These specialized units deliver where it matters most and equipped with advanced features to handle demanding environments efficiently, safely, and without compromise.

## TRIPLE AXLE POWER

The tri-drive configuration delivers stability, agility, and off-road performance and built to navigate the toughest job sites with confidence and ease.

## HIGHPRESSURE WATER SYSTEM

Our hydrovacs feature high-pressure water systems designed for controlled, non-destructive excavation, ideal for sensitive work near underground utilities, in congested areas, or on demanding oilfield sites.

## HIGHVOLUME VACUUM

Equipped with powerful vacuum systems, our hydrovacs quickly and efficiently remove wet and dry materials, including soil, debris, and sludge, ensuring clean and safe work areas across even the toughest oilfield conditions.

## DEBRIS TANK

Designed with large debris tanks, our hydrovacs minimize offloading interruptions, keeping crews productive and projects moving, even in remote oilfield environments.

## OPERATORFRIENDLY CONTROLS

Intuitive, operator-friendly controls help ensure safe, confident operation, reducing risk and enhancing performance in high-stakes oilfield environments.

# SUPERSUCKER VACUUM SYSTEM (W/O WATER)

The OVS Texas Supersuckers, our high-performance vacuum trucks, are purpose-built for tough industrial and oilfield environments. Engineered for strength and efficiency, these units remove liquids, solids, sludge, and debris with ease, making them essential for cleanup, containment, and recovery operations in the field.

## TANK SPECS

- 114 US Barrels Total Tank Capacity 57 US Barrels
- Legal Road Transport Capacity

## VACUUM SYSTEM

- 28 in Hg Vacuum Pressure Mechanical agitator ensures solids will remain suspended in the product, preventing clogs and maintaining the state of the slurry.

## HATCH DOOR

- 180° Opening for Easy Tank Cleanout and Cost Savings

## DIMENSIONS

- 38' Overall Unit Length

## WEIGHT

- 47,200 lbs Tare Weight

**Policy period**

11/30/24 to 11/30/25

Dear Policyholder,

Enclosed is our policyholder packet. Thank you for choosing Texas Mutual Insurance Company. We know you have a choice of workers' compensation carriers, and we are determined to continue to earn your business. As a policyholder-owned mutual company, Texas Mutual is singularly focused on serving you and your employees. We work hard to help you control your premium, fight workers' compensation fraud and prevent workplace accidents. If your employees get injured on the job, our professionals are committed to helping them get well and return as productive members of the workforce.

Thank you again for your partnership. Please let us know if there is anything we can do to improve our service to you.

Sincerely,

Jeanette Ward  
President & CEO
